SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

48) A company manufactures two products. For \$1.00 worth of product A, the company spends \$0.40 on materials, \$0.25 on labor, and \$0.10 on overhead. For \$1.00 worth of product B, the company spends \$0.50 on materials, \$0.20 on labor, and \$0.10 on overhead. Let 48) _______________

$$\mathbf{a} = \begin{bmatrix} 0.40 \\ 0.25 \\ 0.10 \end{bmatrix} \text{ and } \mathbf{b} = \begin{bmatrix} 0.50 \\ 0.20 \\ 0.10 \end{bmatrix}.$$

Then **a** and **b** represent the "costs per dollar of income" for the two products.
Evaluate 100**a** + 400**b** and give an economic interpretation of the result.

Answer: $100\mathbf{a} + 400\mathbf{b} = \begin{bmatrix} 240 \\ 105 \\ 50 \end{bmatrix}$

100**a** + 400**b** lists the various costs for producing \$100 worth of product A and \$400 worth of product B, namely \$240 for materials, \$105 for labor, and \$50 for overhead.

49) A company manufactures two products. For \$1.00 worth of product A, the company spends \$0.50 on materials, \$0.20 on labor, and \$0.15 on overhead. For \$1.00 worth of product B, the company spends \$0.45 on materials, \$0.20 on labor, and \$0.15 on overhead. Let 49) _______________

$$\mathbf{a} = \begin{bmatrix} 0.50 \\ 0.20 \\ 0.15 \end{bmatrix} \text{ and } \mathbf{b} = \begin{bmatrix} 0.45 \\ 0.20 \\ 0.15 \end{bmatrix}.$$

Then **a** and **b** represent the "costs per dollar of income" for the two products.
Suppose the company manufactures x_1 dollars worth of product A and x_2 dollars worth of product B and that its total costs for materials are \$140, its total costs for labor are \$60, and its total costs for overhead are \$45.
Determine x_1 and x_2, the dollars worth of each product produced. Include a vector equation as part of your solution.

Answer: $x_1\mathbf{a} + x_2\mathbf{b} = \begin{bmatrix} 140 \\ 60 \\ 45 \end{bmatrix}$

or

$$x_1 \begin{bmatrix} 0.50 \\ 0.20 \\ 0.15 \end{bmatrix} + x_2 \begin{bmatrix} 0.45 \\ 0.20 \\ 0.15 \end{bmatrix} = \begin{bmatrix} 140 \\ 60 \\ 45 \end{bmatrix}$$
